SUMMARY

Full-stack developer working across **Flutter** and **Java / Spring Boot**, with 3+ years shipping mobile and web products end-to-end — the data model, the API, the clients, and the infrastructure it runs on. Currently the sole Flutter developer on FixiTruck at Dadilion (live on Google Play & the App Store), and independently built and operate a multi-branch education-center SaaS for a live paying customer (Spring Boot API + React admin/teacher web + Flutter mobile, on a self-managed VPS). Favour clean architecture, explicit error handling, and code the next person can read.

SKILLS

Backend	Java 21, Spring Boot 3, Spring Security, Spring Data JPA, Hibernate, REST API design, JWT (rotating refresh), RBAC, multi-tenant isolation, PostgreSQL
Mobile	Flutter, Dart, BLoC, Riverpod, Clean Architecture, GetIt, GoRouter, Dio, Hive, Firebase (FCM/Crashlytics/Analytics), Google Maps
Web	React, TypeScript
Infra / DevOps	Docker, nginx, systemd, TLS (Let's Encrypt), Vultr / DigitalOcean VPS, CI/CD, Git
Tools	Postman, Swagger, IntelliJ IDEA, VS Code

WORK EXPERIENCE

Flutter Developer — Dadilion

Jan 2026 – Present · Samarkand

FixiTruck — truck fleet maintenance (iOS & Android) · **live on Google Play & the App Store**

- Sole developer of a production cross-platform Flutter app for fleet maintenance and roadside repair, with Clean Architecture (data / domain / presentation), BLoC, GetIt, GoRouter, and functional Either-based error handling.
- Built a multi-step pre-trip inspection flow with a custom sequential camera (framing guides, per-item photo slots, validation) and offline-capable Hive caching.
- Integrated Firebase (FCM, Crashlytics, Analytics), Google Maps live tracking, phone-OTP / Google / Apple sign-in, and JWT auto-refresh with concurrent-request synchronisation.
- Maintained a shared design system (20+ reusable components) and a 5-locale localization layer, enforced through lint rules.

Freelance Full-Stack Developer — Independent

2024 – Present

Creative Learning Center — multi-branch education SaaS · **live customer at creativelc.uz**

- Built and operate a multi-branch learning-center platform (students, groups, teachers, enrolments, attendance, payments, lead tracking, reporting) serving a live paying customer.
- Designed a REST API of 14 Spring Boot controllers on Spring Data JPA, with stateless JWT auth (15-min access, rotating 7-day refresh) and RBAC (SUPER_ADMIN / BRANCH_ADMIN / TEACHER).
- Implemented tenant-style branch isolation in a shared database via a central security service, so a branch admin can only ever reach their own branch's data.
- Shipped three clients against one backend: a React admin dashboard, a standalone React teacher app, and a Flutter mobile app (BLoC, Dio, Hive) with offline support.
- Migrated production from Railway to a self-managed Vultr VPS (systemd, nginx, TLS, scripted deploy); cut report/listing latency by replacing N+1 queries with batched aggregation.

Flutter Developer (Intern) — Udevs

Sep 2023 – Nov 2023 · Tashkent

- Contributed to production Flutter/Dart apps: UI features, reusable components, REST API integration, and state management, following established architecture and coding standards.

PROJECTS

iStudy Personal education app on the same stack — Flutter client against a Spring Boot + PostgreSQL REST API · github.com/NorpulatovDev/iStudy

EDUCATION

Seojeong University, South Korea — Tourism & Travel (incomplete) 2024 – 2025
Codeschool IT Academy — programming foundations (Dart / Flutter); later assistant mentor 2022 – 2023
